Find Buying Information About Multifunction Printer

All in One Printers, which is having known too, as Multifunction Printers, is an integrated printer that will give you several functions. In usual, the lowest price only gives you the function for printing, scanning, and copying. But, some higher price printer is giving the function of scanning and faxing. Other function is increased based on market needs, like printing file from memory card or usb flash drive, using the printer for network sharing, or increasing the speed and the number of dpi.

[multifunction printer](#) can come with the features that related with ink color. Some multifunction printer can copy and scan either in color or black-and-white, and another just can copy and scan with black-and-white.

Buying Guide

If you need All in One Printers, firstly you need to decide what kind of functions you need. Use your budget to decide the Multifunction Printer that will function as what you need effectively and efficiently. Look for All in One Printers that give the better-than-average features for the function that you mainly need or you'll use more often than others. For example, if you need or you'll use printing function more often than others, select the All in One Printer that allows glass-top copying. And if faxing is important features for you, select the one that contains memory for storing documents.

Secondly, you need to decide what kind of type printing from All in One Printers that you need. There are two options, inkjet and laser. Inkjet technology will provide the high-level color printing capabilities. On the other hand, laser technology will give the higher output printing quality and in usual, this type is more expensive. Thirdly, there is no All in One Printer that has function as ADF (Automatic Document Feeder) and slide scan. So you have to choose one as well.

Then the last, maybe it's worth to pay some additional money for All in One Printer's speed. It's a reality that if you work with Slow Multifunction Printer, you'll be frustrated when you use it.

Some Suggestion

For Beginner, which means too for those who need the basic function of printing, scanning, and copying, you can use a printer with flat-bed scanner, like HP F2180, Epson Stylus DX8450, Canon PIXMA MP610, which is range from \$60 to \$230.

Then for intermediate needs, which is mean that you need the All in One Printer having OCR (Optical Character Recognition) , probably you can choose Canon PIXMA MP600R, HP Photosmart C8180, Brother MFC 7420. The intermediate level needs range from \$210 to \$525.

The last level is advance. This level needs high-level printing quality, scan and transmit the high quality images, and printing photographic images onto high quality paper. The type of advance is like Brother MFC 9440CN, Canon LaserBase MF8180C, HP LaserJet M3027 MFP which range from \$905 to \$1400.

When you need [laser all in one printers](#), think it twice before you buy it. Consider the function and the prices. The right decision in buying will guide you to the simplicity and efficiency.
